

FOR AI PLATFORM COMPANIES

The independent verification layer for agentic systems.

Platforms supply model capability. Noetfield supplies the governance harness their enterprise and institutional customers deploy it under: explicit authority before action, bounded agentic workflows, separate-verifier acceptance, and receipts for every accepted outcome.

The thesis

Enterprises adopting agents face the questions regulators and boards already ask: who authorized this action, what evidence was inspected, what happened when it failed, and who accepted the result. Most agent stacks answer none of these. An answer is only credible when it comes from a party that is not the model vendor and not the operator. Noetfield is built to be that independent party.

What the layer provides

- Authority before action — execution starts from a scoped, authorized goal, never an open prompt; policy, budget, and context are resolved into a deterministic envelope first.
- Independent verification — a separate verifier judges every candidate against acceptance criteria; the model never grades its own work.
- Bounded failure — repair attempts are budgeted; exhausting the bound produces a documented safe stop, not a silent pass.
- Receipts — every accepted outcome preserves what ran, which authority applied, what failed, how it was repaired, and why promotion was accepted.
- Model-agnostic by design — built for open and hosted models alike; the platform relationship is complementary, not competitive.

Where it fits your ecosystem

As a verification and governance harness for customers deploying your models or agent platform on consequential work; as a structured pre-model layer (schema-valid-or-fail contracts) for developer ecosystems; and as a regulated-workflow reference through TrustField, Noetfield's compliance product vertical for FINTRAC case operations.

Evidence discipline

Noetfield operates its own delivery on its own runtime and publishes the receipts, the practice IBM calls Client Zero and Microsoft calls Customer Zero, with the same honesty those programs state: internal use does not replace external customers. The public register at noetfield.com/proof states what each item proves and does not prove. Status: live alpha, founder-operated. First-party evidence is published at noetfield.com/proof. No external customers or revenue yet. A receipt is not certification.
